

South African - Summer Rainfall Region Planting Calendar

Please note that this planting calendar is a 'best effort' compilation, produced by Organic Seeds, from many other planting calendars obtained from various sources. As always, this information is for informational and educational purposes only. Organic Seeds does not take responsibility for the accuracy of the information contained herein. Also be aware that our climate conditions are continually changing and that regional and micro-climate conditions will also affect the accuracy of this calendar - i.e. we hate to have to say it but 'Your results may vary'.

Summer Rainfall Region

Summer Rainfall - Hot summer and cold winter with frost in some parts. Includes most of Gauteng and Limpopo Province, the Free State highveld, Mpumalanga highveld, North West and Northern Provinces, and the KZN Midlands.

ST = Start in Seed Trays P = Plant/Sow in Ground TS = Transplant Seedlings

NOTES

You will notice that many of the plant varieties have, late in the planting season, been marked as 'TS' (Transplant Seedlings). This is due to the fact that there will generally not be enough time left during the growing season, for the plants to reach maturity and produce a harvest, if the seeds are sown directly at that time.

Shallots generally do better when planted as seedlings or 'starts' than from seed.
